

VP390 Vehicle Tracking Device

The VP390 is our mid entry-level device, designed as a universal solution for 24/7 web-based visibility and continuous tracking. This real-time device functions on our 1, 2 and 5 minute rate plans.

The unit is engineered and built with the quality components needed to meet the high reliability requirements of always-on tracking. The VP390 is a robust fleet device that not only allows one-sensor input but also supports remote door unlock and starter disable features.

Designed to operate in extreme environmental conditions, the VP390 is supported by our optional 3-year extended manufacturer's warranty.

Target Markets:

- Most general businesses, plus those that require I/O input/starter disable and/or door unlock
- Areas susceptible to weak cell coverage, thanks to the unit's extended memory capacity

Product Differentiators:

- Starter disable and/or remote door unlock
- PTO input
- Ruggedized casing
- Extended store-and-forward capacity
- Antenna can be positioned in various locations on the windshield and/or covertly installed depending on vehicle type

Capable of supporting remote door unlock and starter disable

I/O capabilities: 1 input and 2 outputs

Voltage monitoring and low battery notification

Over-the-air firmware upgrade capability

3,000 buffered messages for store-and-forward functionality

GSM dual-band (850/1900 MHz) operating on the AT&T Wireless GPRS data network
