

VP500 Vehicle Tracking Device

The VP500 is our top-of-the-line real-time tracking device, designed as a universal solution for 24/7 visibility and continuous vehicle tracking. In addition to supporting our 1, 2, and 5 minute update rate plans, the VP500 also supports a 30-second rate plan. This plan is offered specifically for the needs of first responders, public safety officials and customers who require real-time tracking with 30-second updates.

In addition to remote door unlock and starter disable, the VP500 is engineered to support up to four digital sensors/inputs for monitoring activities of the vehicle such as plow up/down or sirens on/off.

The VP500 also has the most store-and-forward buffer capacity of any Vehiclepath product. Like all of our products, it includes configurable parameters and firmware that can be updated over-the-air. It also is supported by our optional 3-year extended warranty.

Target Markets:

- Police Departments
- Federal/state and local governments
- Ambulance services
- Disabled, special-needs transportation companies
- Fuel delivery

Product Differentiators:

- Supports multiple inputs
- Supports 30-second update rates
- Largest store/forward capacity
- Includes our best and most sensitive dual-band antenna, which can be positioned in various locations and covertly installed depending on vehicle type

- Supports remote door unlock and starter disable
- Comprehensive I/O capabilities: 4 inputs, 2 outputs
- Voltage monitoring and low- battery notification
- 5,000 buffered messages for store-and-forward functionality
- GSM quad-band (850/900/1800/1900 MHz) operating on the AT&T Wireless GPRS data network
- Supports 30-second update rate plan
- High Sensitivity GPS (-160dBm)
- Over-the-air firmware-upgrade capability
